ABSTRACT:

PROBLEM TO BE SOLVED: To contain a voice telephone set to a LAN

SOLUTION: In the case of making communication from a voice telephone set 5 to a voice telephone set 8 for example, information is exchanged between personal computers 2, 4 ancillary to them via a switch device 50 and a LANhub 20 and call control is conducted. LANhub 10, a Voice data of the voice telephone sets 5, 8 are processed into packets into a LANSW data part of each MAC frame by TLAs 30, 40 and relays to Interfaces 30a, 40a. A frame having fluctuation absorption function is applied to the data part on the interfaces 30a, 40a. Based on the MAC address of the MAC frame, voice data processed as packets are given respectively to the telephone sets 8, 5 via the TLAs 40, 30.
